

Baby Cry Signaler

A big concern of many people with hearing loss is not being able to hear someone in another room. For hard of hearing parents or grandparents who need to know when the baby is crying, a device like The Sonic Sitter, model BC 400, can alert them to sounds as soft as a baby's whisper.

The BC 400 plugs into any outlet in the baby's room, and when the baby cries, the wireless BC 400 sends a signal over your home's electrical system to remote receivers. No lamp flashes in the baby's room, so the baby is not disturbed. You will need to use at least one remote receiver with the Sonic Sitter.

This device also has a built-in indicator light to show you it's working.
