

Music Link T-Coil Coupling Device

This device works with your hearing aid or cochlear implant telecoil to couple with assistive listening devices, audio systems and cell phones.

Features:

Small and lightweight

Uses standard 1/8 inch (3.5 mm) mini-stereo plug to plug into most stereo devices

Both single and dual models to use with one ear or two

Comes in two colors—black (above) or white (right)

Total length 46" (36" from plug to "Y" where the cords separate for each ear hook)

For a longer cord, Radio Shack has a 6 ft. stereo headphone extension cable

If used with a personal amplifier such as the PockeTalker (which has a mono jack), you'll need to get a stereo to mono adapter from Radio Shack or you'll only hear in one ear.
