

POCKETALKER PRO System

The Pocketalker is an example of a personal amplifier which can be used for 1-on-1 conversations, TV listening, listening in small groups, or in the car. This unit amplifies sound for better understanding, and can be used with or without a hearing aid. Batteries last up to 100 hours.

The Pocketalker includes a plug-in microphone and a microphone extension cord for use in a listening situation where the sound source is further away, such as the television.

The Pocketalker can be used with earphones, an earbud or headphones. People who have telecoil-equipped hearing aids can also use the neckloop accessory which is a separate purchase.

Listeners can use the Telelink adapter with the Pocketalker to amplify telephone calls.
