

The Sonic Boom™ Alarm Clock

It's easy for people with hearing loss to sleep through the sound of their alarm clocks, and that can be very frustrating. There are several alarm clocks that are designed specifically for people who are hard of hearing. One of them, the Sonic Boom™ Alarm Clock, can awaken even the heaviest sleepers. You can choose to wake up to a loud audio alarm, flashing lights, shaking bed (vibrator sold separately), or a combination of all three. You can select the best volume and tone controls for your hearing loss. The clock display has an adjustable viewing angle with large, bright green LED numbers. It also has a battery back up for power outages. (9 volt battery not included.)

The clock has a built-in receiver to pick up transmissions from other Sonic Alert signalers. There is also a test button on the unit to explore which combination of flashing lights, shaking bed or loud pulsating audio alarm will work best for you.

Super Shaker Bed Vibrator SS 12V

The Super Shaker Bed Vibrator can be placed under your pillow or between your mattress and box spring. The powerful vibrations can wake up extremely heavy sleepers. A built-in temperature sensor protects the unit against overheating. The Super Shaker SS 12V Bed Vibrator is designed to be plugged into the vibrator outlet on the back of the Sonic Boom™ Alarm Clock.
