

Uniphone

The Uniphone is an example of a combination system that offers telephone, TTY and amplified phone in one unit. People who are deaf, hard of hearing and hearing can all share this type of phone.

If you need to use a TTY, the Uniphone offers a bright display and a comfortable keyboard.

You can also use the Uniphone to make Voice Carry Over (VCO) calls. With VCO, you speak directly to the other person and read their typed responses on the

display. VCO calls can be made through a toll-free relay service or directly between Uniphone users for privacy. In a similar way, if you can hear but have difficulty speaking, you can make Hearing Carry Over (HCO) calls with the Uniphone.

You can adjust the volume in the amplified headset to the most comfortable setting for your hearing loss.

The Uniphone 1140 answers calls with your personalized greeting and takes TTY messages when you are unavailable. The 8k memory lets you save and review Auto-Answer messages, conversations and your personalized greeting.

Ten speed-dial locations let you reach frequently-called numbers, and there are special keys for storing emergency phone numbers.
